# Product Summability $(\mathbf{E}, 1)\left(\mathbf{N}, \mathbf{P}_{\mathbf{n}}\right)$ of Conjugate Series Of Fourier Series 

## Manju Prabhakar

Department of Mathematics, Govt. Motilal Vigyan Mahavidyalaya, Bhopal, (M.P.) India

#### Abstract

In the present study, some results on the product summability $(E, 1)\left(N, P_{n}\right)$ of Conjugate Fourier series have been established.

KEYWORDS: $(E, q)$ summability, $\left(N, P_{n}\right)$ summability, $(E, 1)\left(N, P_{n}\right)$ summability. MATHEMATICS SUBJECT CLASSIFICATION (2010): 42A24, 42A20 and 42B08

[^0]
## INTRODUCTION

The study of Nörlund ( $N, P_{n}$ ) suumability of Fourier series and its allied series was first studied by Mears ${ }^{1}$ and then afterwards so many results deduced on the product summability of Nörlund means by a regular summability (i.e. in the form of $X\left(N, P_{n}\right)$ or $\left(N, P_{n}\right) X$, where $X$ is any regular summability). In the same context, Lal and Nigam ${ }^{2}$, Lal and Singh ${ }^{3}$, Prasad $^{4}$, Sahney ${ }^{5}$, Sinha and Shrivastava ${ }^{6}$ and many researchers gave interesting results under different criteria \& conditions. Therefore by inspiring this, under a very general condition, we have established some results on $(E, 1)\left(N, P_{n}\right)$ summability of conjugate series of Fourier series. As a result, we see that the product operator gives better approximated value than individual linear operator.

Let $\sum_{n=0}^{\infty} a_{n}$ be a given infinite series with the sequence of its partial $\operatorname{sums}\left\{S_{n}\right\}$. Let $\left\{p_{n}\right\}$ be any sequence of constants, real or complex, such that
$\mathrm{P}_{\mathrm{n}}=\mathrm{p}_{0}+\mathrm{p}_{1}+\mathrm{p}_{2}+\cdots+\mathrm{p}_{\mathrm{n}}$
$\mathrm{P}_{-1}=\mathrm{p}_{-1}=0$
Therefore,
The sequence-to-sequence transformation is given by
$\mathrm{t}_{\mathrm{n}}=\frac{1}{\mathrm{P}_{\mathrm{n}}} \sum_{\mathrm{k}=0}^{\mathrm{n}} \mathrm{p}_{\mathrm{n}-\mathrm{k}} \mathrm{s}_{\mathrm{k}}$
defines the sequence $\left\{t_{n}\right\}$ of Nörlund means of the sequence $\left\{S_{n}\right\}$, as generated by the sequence of coefficients $\left\{p_{n}\right\}$.

The series $\sum_{n=0}^{\infty} a_{n}$ is said to be ( $\mathrm{N}, \mathrm{P}_{\mathrm{n}}$ ) summable to the sum s if $\lim _{n \rightarrow \infty} t_{n}$ exists and is equal to $s$.
The necessary and sufficient condition for the regularity of $\left(\mathrm{N}, \mathrm{P}_{\mathrm{n}}\right)$ method is
$\frac{\mathrm{p}_{\mathrm{n}}}{\mathrm{P}_{\mathrm{n}}} \rightarrow 0, \quad$ as $\mathrm{n} \rightarrow \infty$
Let,
$\mathrm{E}_{\mathrm{n}}^{1}=\frac{1}{2^{\mathrm{n}}} \sum_{\mathrm{k}=0}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}} \mathrm{s}_{\mathrm{k}}$
If $\mathrm{E}_{\mathrm{n}}^{1} \rightarrow s$, as $\mathrm{n} \rightarrow \infty$ then $\sum_{n=0}^{\infty} a_{n}$ is said to be summable s by Euler means. Hardy ${ }^{7}$
On superimposing ( $\mathrm{E}, 1$ ) transform on $\left(\mathrm{N}, \mathrm{P}_{\mathrm{n}}\right)$ transform, we have the product $(\mathrm{E}, 1)\left(\mathrm{N}, \mathrm{P}_{\mathrm{n}}\right)$ transform $\mathrm{t}_{\mathrm{n}}^{\mathrm{EN}}$ of the $\mathrm{n}^{\text {th }}$ partial series $\mathrm{S}_{\mathrm{n}}$ of the series $\sum_{n=0}^{\infty} a_{n}$ which is given by
$\mathrm{t}_{\mathrm{n}}^{\mathrm{EN}}=\frac{1}{2^{\mathrm{n}}} \sum_{\mathrm{k}=0}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}}\left\{\frac{1}{\mathrm{p}_{\mathrm{k}}} \sum_{\mathrm{v}=0}^{\mathrm{k}} \mathrm{p}_{\mathrm{k}-\mathrm{v}} \mathrm{s}_{\mathrm{v}}\right\}$
then, the infinite series $\sum_{n=0}^{\infty} a_{n}$ is said to be $(\mathrm{E}, 1)\left(\mathrm{N}, \mathrm{P}_{\mathrm{n}}\right)$ summable to the sum s,
if $\mathrm{t}_{\mathrm{n}}^{\mathrm{EN}} \rightarrow \mathrm{s}$ as $\mathrm{n} \rightarrow \infty$ i.e. the limit exist.
Let, $\mathrm{f}(\mathrm{t})$ be a periodic function with period $2 \pi$ and Lebesgue-integrable over the interval $(-\pi, \pi)$. Then the Fourier series associated with $f$ at any point $t$ is defined by
$f(t) \sim \sum_{n=1}^{\infty}\left(a_{n} \cos n t+b_{n} \sin n t\right)=\sum_{n=1}^{\infty} A_{n}(t)$
Then the conjugate series of (1.1) is
$\sum_{n=1}^{\infty}\left(b_{n} \cos n t-a_{n} \sin n t\right)=\sum_{n=1}^{\infty} B_{n}(t)$

We use the following notations throughout this paper
$\psi(\mathrm{t})=\frac{1}{2}[\mathrm{f}(\mathrm{x}+\mathrm{t})-\mathrm{f}(\mathrm{x}-\mathrm{t})]$
and

$$
\begin{equation*}
\widetilde{\mathrm{K}}_{\mathrm{n}}(\mathrm{t})=\frac{1}{2^{\mathrm{n}}} \sum_{\mathrm{k}=0}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}}\left\{\frac{1}{\mathrm{P}_{\mathrm{k}}} \sum_{v=0}^{\mathrm{k}} \mathrm{p}_{\mathrm{k}-v} \frac{\cos \left(v+\frac{1}{2}\right) \mathrm{t}}{\sin \frac{\mathrm{t}}{2}}\right\} \tag{1.3}
\end{equation*}
$$

## KNOWN RESULTS

Recently, Sinha and Shrivastava ${ }^{6}$ have discussed the almost (E, $q$ ) $\left(N, P_{n}\right)$ summability of Fourier Series by proving the following
Theorem A. If $\mathbf{f}$ is a $2 \pi$ periodic function of class $L^{\text {a }} \mathrm{ip} \alpha$ then the degree of approximation by the product $(E, q)\left(N, P_{n}\right)$ summability mean on its Fourier series (1.1) is given by

$$
\begin{equation*}
\left\|\tau_{\mathrm{n}}-\mathrm{f}\right\|_{\infty}=\mathrm{o}\left(\frac{1}{(\mathrm{n}+1)^{\alpha}}\right) \quad 0<\alpha<1 \tag{2.1}
\end{equation*}
$$

where, $\tau_{\mathrm{n}}$ is defined as
$\tau_{\mathrm{n}}=\frac{1}{(1+\mathrm{q})^{\mathrm{n}}} \sum_{\mathrm{m}=0}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}} \mathrm{q}^{\mathrm{n}-\mathrm{k}}\left\{\frac{1}{\mathrm{P}_{\mathrm{k}}} \sum_{v=0}^{\mathrm{k}} \mathrm{p}_{\mathrm{k}-\mathrm{v}} \mathrm{S}_{v}\right\}$
Further, Prabhakar and Saxena ${ }^{8}$, have obtained an analogous result by generalised theorem A for $(E, 1)\left(N, P_{n}\right)$ summability of Fourier series under different condition and criteria. The Theorems are as follows

Theorem B. Let $\left\{c_{n}\right\}$ be a non-negative, monotonic, non-increasing sequence of real constants such that
$\mathrm{C}_{\mathrm{n}}=\sum_{\mathrm{v}=1}^{\mathrm{n}} \mathrm{c}_{\mathrm{v}} \rightarrow \infty$, as $\mathrm{n} \rightarrow \infty$
If
$\Phi(\mathrm{t})=\int_{0}^{\mathrm{t}}|\phi(\mathrm{u})| \mathrm{du}=\mathrm{o}\left[\frac{\mathrm{t}}{\alpha\left(\frac{1}{\mathrm{t}}\right) \mathrm{C}_{\mathrm{t}}}\right]$ as $\mathrm{t} \rightarrow+0$
where, $\alpha(\mathrm{t})$ is a positive, monotonic and non-increasing function of t and $\log (\mathrm{n}+1)=$ $\mathrm{O}\left[\{\alpha(\mathrm{n}+1)\} \mathrm{C}_{\mathrm{n}+1}\right]$, as $\mathrm{n} \rightarrow \infty$
then the Fourier series $(1.1)$ is $(E, 1)\left(N, P_{n}\right)$ summable to zero at point $x$.

## MAIN RESULT

With this point of view, we here prove the following theorems.
Theorem 1. Let $\left\{c_{n}\right\}$ be a non-negative, monotonic, non-increasing sequence of real constants such that
$\mathrm{C}_{\mathrm{n}}=\sum_{v=0}^{\mathrm{n}} \mathrm{c}_{v} \rightarrow \infty$ as $\mathrm{n} \rightarrow \infty$
If
$\Psi(\mathrm{t})=\int_{0}^{\mathrm{t}}|\Psi(\mathrm{u})| \mathrm{du}=\mathrm{o}\left[\frac{\mathrm{t}}{\alpha\left(\frac{1}{\mathrm{t}}\right) \mathrm{C}_{\mathrm{r}}}\right]$ as $\mathrm{t} \rightarrow+0$
where, $\alpha(t)$ is a positive, monotonic and non-increasing function of $t$ and
$\log (\mathrm{n}+1)=\mathrm{O}\left[\{\alpha(\mathrm{n}+1)\} \mathrm{C}_{\mathrm{n}+1}\right]$, as $\mathrm{n} \rightarrow \infty$
then the conjugate Fourier series (1.2) is $(\mathrm{E}, 1)\left(\mathrm{N}, \mathrm{P}_{\mathrm{n}}\right)$ summable to
$\tilde{\mathrm{f}}(\mathrm{x})=-\frac{1}{2 \pi} \int_{0}^{2 \pi} \psi(\mathrm{t}) \cot \left(\frac{\mathrm{t}}{2}\right) \mathrm{dt}$
at every pt, where this integral exists.
Theorem 2: Let $\left\{c_{n}\right\}$ be a positive, monotonic, non-increasing sequence of real constants such that
$\mathrm{C}_{\mathrm{n}}=\sum_{v=0}^{\mathrm{n}} \mathrm{c}_{v} \rightarrow \infty$ as $\mathrm{n} \rightarrow \infty$
If
$\Psi(\mathrm{t})=\int_{0}^{\mathrm{t}}|\Psi(\mathrm{u})| \mathrm{du}=\mathrm{o}\left[\frac{\mathrm{t}}{\log \left(\frac{1}{\mathrm{t}}\right)}\right]$, as $\mathrm{t} \rightarrow+0$
then the conjugate Fourier series (1.2) is $(\mathrm{E}, 1)\left(\mathrm{N}, \mathrm{P}_{\mathrm{n}}\right)$ summable to
$\tilde{f}(x)=-\frac{1}{2 \pi} \int_{0}^{2 \pi} \psi(t) \cot \left(\frac{\mathrm{t}}{2}\right) \mathrm{dt}$
at every pt, where this integral exists.
To prove the following Theorems, we require the following lemmas.

## LEMMAS

## Lemma 4.1

For $0 \leq \mathrm{t} \leq \frac{1}{\mathrm{n}+1},\left|\widetilde{\mathrm{~K}}_{\mathrm{n}}(\mathrm{t})\right|=\mathrm{O}\left(\frac{1}{\mathrm{t}}\right)$

## Proof.

$$
\begin{aligned}
\left|\widetilde{K}_{n}(\mathrm{t})\right|= & \frac{1}{2^{\mathrm{n}+1} \pi}\left|\sum_{\mathrm{k}=0}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}}\left\{\frac{1}{\mathrm{P}_{\mathrm{k}}} \sum_{v=0}^{\mathrm{k}} \mathrm{p}_{\mathrm{k}-\mathrm{v}} \frac{\cos \left(v+\frac{1}{2}\right) \mathrm{t}}{\sin \frac{\mathrm{t}}{2}}\right\}\right| \\
& \leq \frac{1}{2^{\mathrm{n}+1} \pi}\left[\sum_{\mathrm{k}=0}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}}\left\{\frac{1}{\mathrm{P}_{\mathrm{k}}} \sum_{v=0}^{\mathrm{k}} \mathrm{p}_{\mathrm{k}-\mathrm{v}} \frac{\left|\cos \left(v+\frac{1}{2}\right) \mathrm{t}\right|}{\left|\sin \frac{\mathrm{t}}{2}\right|}\right\}\right] \\
& \leq \frac{1}{2^{\mathrm{n}+1} \mathrm{t}}\left[\sum_{\mathrm{k}=0}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}} \frac{1}{\mathrm{P}_{\mathrm{k}}} \sum_{v=0}^{\mathrm{k}} \mathrm{p}_{\mathrm{k}-v}\right] \\
& =\frac{(2 \mathrm{n}+1)}{2^{\mathrm{n}+1} \mathrm{t}} \cdot 2^{\mathrm{n}} \\
& =\mathrm{O}\left(\frac{1}{\mathrm{t}}\right)
\end{aligned}
$$

This completes the proof of Lemma 3.1

## Lemma 4.2

For $\frac{1}{\mathrm{n}+1} \leq \mathrm{t} \leq \pi,\left|\widetilde{\mathrm{K}}_{\mathrm{n}}(\mathrm{t})\right|=\mathrm{O}\left(\frac{1}{\mathrm{t}}\right)$

## Proof.

$$
\begin{aligned}
& \left|\widetilde{\mathrm{K}}_{\mathrm{n}}(\mathrm{t})\right|=\frac{1}{2^{n+1} \pi}\left|\sum_{\mathrm{k}=0}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}}\left\{\frac{1}{\mathrm{P}_{\mathrm{k}}} \sum_{v=0}^{\mathrm{k}} \mathrm{p}_{\mathrm{k}-v} \frac{\cos \left(v+\frac{1}{2}\right) \mathrm{t}}{\sin \frac{\mathrm{t}}{2}}\right\}\right| \\
& \leq \frac{1}{2^{\mathrm{n}+1} \mathrm{t}}\left|\sum_{\mathrm{k}=0}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}} \operatorname{Re}\left\{\frac{1}{\mathrm{P}_{\mathrm{k}}} \sum_{v=0}^{\mathrm{k}} \mathrm{p}_{\mathrm{k}-v} \mathrm{e}^{\mathrm{i}\left(v+\frac{1}{2}\right) \mathrm{t}}\right\}\right| \\
& \leq \frac{1}{2^{\mathrm{n}+\mathrm{t}}}\left|\sum_{\mathrm{k}=0}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}} \operatorname{Re}\left\{\frac{1}{\mathrm{P}_{\mathrm{k}}} \sum_{v=0}^{\mathrm{k}} \mathrm{p}_{\mathrm{k}-v} \mathrm{v}^{\mathrm{i} v \mathrm{t}}\right\}\right|\left|\mathrm{e}^{\mathrm{i} \frac{\mathrm{t}}{2}}\right| \\
& \leq \frac{1}{2^{\mathrm{n}+\mathrm{t}_{\mathrm{t}}}}\left|\sum_{\mathrm{k}=0}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}} \operatorname{Re}\left\{\frac{1}{\mathrm{P}_{\mathrm{k}}} \sum_{v=0}^{\mathrm{k}} \mathrm{p}_{\mathrm{k}-v} \mathrm{e}^{\mathrm{ivt}}\right\}\right| \\
& \leq \frac{1}{2^{\mathrm{n}+\mathrm{t}}}\left|\sum_{\mathrm{k}=0}^{\tau-1}\binom{\mathrm{n}}{\mathrm{k}} \operatorname{Re}\left\{\frac{1}{\mathrm{P}_{\mathrm{k}}} \sum_{v=0}^{\mathrm{k}} \mathrm{p}_{\mathrm{k}-v} \mathrm{e}^{\mathrm{ivt}}\right\}\right|+\frac{1}{2^{\mathrm{n}+1} \mathrm{t}}\left|\sum_{\mathrm{k}=\tau}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}} \operatorname{Re}\left\{\frac{1}{\mathrm{P}_{\mathrm{k}}} \sum_{v=0}^{\mathrm{k}} \mathrm{p}_{\mathrm{k}-v} \mathrm{e}^{\mathrm{ivt}}\right\}\right| \\
& =\left|\mathrm{K}_{1}\right|+\left|\mathrm{K}_{2}\right| \\
& \left|\mathrm{K}_{1}\right| \leq \frac{1}{2^{\mathrm{n}+1} \mathrm{t}}\left|\sum_{\mathrm{k}=0}^{\mathrm{c}-1}\binom{\mathrm{n}}{\mathrm{k}} \operatorname{Re}\left\{\frac{1}{\mathrm{p}_{\mathrm{k}}} \sum_{v=0}^{\mathrm{k}} \mathrm{p}_{\mathrm{k}-\mathrm{v}} \mathrm{e}^{\mathrm{ivt}}\right\}\right| \\
& \leq \frac{1}{2^{\mathrm{n}+1}}\left|\sum_{\mathrm{k}=0}^{\tau-1}\binom{\mathrm{n}}{\mathrm{k}}\left\{\frac{1}{\mathrm{P}_{\mathrm{k}}} \sum_{v=0}^{\mathrm{k}} \mathrm{p}_{\mathrm{k}-v}\right\}\right|\left|\mathrm{e}^{\mathrm{ivt}}\right| \\
& \leq \frac{1}{2^{\mathrm{n}+1} \mathrm{t}}\left|\sum_{\mathrm{k}=0}^{\mathrm{\tau}-1}\binom{\mathrm{n}}{\mathrm{k}}\left\{\frac{1}{\mathrm{P}_{\mathrm{k}}} \sum_{v=0}^{\mathrm{k}} \mathrm{p}_{\mathrm{k}-v}\right\}\right| \\
& \leq \frac{1}{2^{\mathrm{n}+1} \mathrm{t}}\left|\sum_{\mathrm{k}=0}^{\mathrm{c}-1}\binom{\mathrm{n}}{\mathrm{k}}\right| \\
& =\mathrm{O}\left(\frac{1}{\mathrm{t}}\right)
\end{aligned}
$$

Now considering second term and using Abel's lemma

$$
\begin{aligned}
& \left|\mathrm{K}_{2}\right| \leq \frac{1}{2^{\mathrm{n}+1} \mathrm{t}}\left|\sum_{\mathrm{k}=\tau}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}} \operatorname{Re}\left\{\frac{1}{\mathrm{P}_{\mathrm{k}}} \sum_{v=0}^{\mathrm{k}} \mathrm{p}_{\mathrm{k}-v} \mathrm{e}^{\mathrm{ivt}}\right\}\right| \\
& \quad \leq \frac{1}{2^{\mathrm{n}+1} \mathrm{t}} \sum_{\mathrm{k}=\tau}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}} \frac{1}{\mathrm{P}_{\mathrm{k}}} \max _{0 \leq \mathrm{m} \leq \mathrm{k}}\left|\sum_{\mathrm{v}=0}^{\mathrm{k}} \mathrm{p}_{\mathrm{k}-v} \mathrm{e}^{\mathrm{ivt}}\right| \\
& \quad=\mathrm{O}\left(\frac{1}{t}\right)
\end{aligned}
$$

This completes the proof of Lemma 3.2 Similarly,

## Lemma 4.3

For $0 \leq \mathrm{t} \leq \frac{1}{\mathrm{n}}$,
$\left|\widetilde{\mathrm{K}}_{\mathrm{n}}(\mathrm{t})\right|=\mathrm{O}\left(\frac{1}{\mathrm{t}}\right)$

## Lemma 4.4

For $\frac{1}{\mathrm{n}} \leq \mathrm{t} \leq \pi$,
$\left|\widetilde{\mathrm{K}}_{\mathrm{n}}(\mathrm{t})\right|=\mathrm{O}\left(\frac{1}{\mathrm{t}}\right)$

## PROOF

## Proof of Theorem 1:

Let, $\tilde{s}_{\mathrm{n}}$ denote the partial sum of conjugate Fourier series (1.2) then following Zygmund, we have
$\tilde{\mathrm{s}}_{\mathrm{n}}-\tilde{\mathrm{f}}(\mathrm{x})=\frac{1}{2 \pi} \int_{0}^{\pi} \psi(\mathrm{t}) \frac{\cos \left(\mathrm{n}+\frac{1}{2}\right) \mathrm{t}}{\sin \frac{\mathrm{t}}{2}} \mathrm{dt}$
Therefore the $(\mathrm{E}, 1)\left(\mathrm{N}, \mathrm{P}_{\mathrm{n}}\right)$ transform of $\tilde{\mathrm{s}}_{\mathrm{n}}(\mathrm{x})$ is given by

$$
\begin{aligned}
\tilde{\mathfrak{t}}_{\mathrm{n}}^{\mathrm{EN}}-\tilde{\mathrm{f}}(\mathrm{x}) & =\frac{1}{2^{\mathrm{n}+1} \pi} \int_{0}^{\pi} \psi(\mathrm{t}) \sum_{\mathrm{k}=0}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}}\left\{\frac{1}{\mathrm{P}_{\mathrm{k}}} \sum_{v=0}^{\mathrm{k}} \mathrm{p}_{\mathrm{k}-\mathrm{v}} \frac{\cos \left(v+\frac{1}{2}\right) \mathrm{t}}{\sin \frac{\mathrm{t}}{2}}\right\} \mathrm{dt} \\
& =\int_{0}^{\pi} \psi(\mathrm{t})\left|\widetilde{\mathrm{K}}_{\mathrm{n}}(\mathrm{t})\right| \mathrm{dt}
\end{aligned}
$$

For $0<\delta<\pi$, we have

$$
\begin{gather*}
\int_{0}^{\pi} \psi(\mathrm{t}) \widetilde{\mathrm{K}}_{\mathrm{n}}(\mathrm{t}) \mathrm{dt}=\int_{0}^{1 / \mathrm{n}+1} \psi(\mathrm{t}) \widetilde{\mathrm{K}}_{\mathrm{n}}(\mathrm{t}) \mathrm{dt}+\int_{1 / \mathrm{n}+1}^{\delta} \psi(\mathrm{t}) \widetilde{\mathrm{K}}_{\mathrm{n}}(\mathrm{t}) \mathrm{dt}+\int_{\delta}^{\pi} \psi(\mathrm{t}) \widetilde{\mathrm{K}}_{\mathrm{n}}(\mathrm{t}) \mathrm{dt} \\
=\mathrm{I}_{1}+\mathrm{I}_{2}+\mathrm{I}_{3} \tag{5.1}
\end{gather*}
$$

Now, by applying (3.1), (3.2) and (4.1), we have

$$
\begin{align*}
\left|I_{1}\right| \leq & \int_{0}^{1 / \mathrm{n}+1}|\Psi(\mathrm{t})|\left|\widetilde{\mathrm{K}}_{\mathrm{n}}(\mathrm{t})\right| \mathrm{dt} \\
& =\mathrm{O} \int_{0}^{1 / \mathrm{n}+1} \frac{1}{\mathrm{t}}|\Psi(\mathrm{t})| \mathrm{dt} \\
& =\mathrm{O}(\mathrm{n}+1) \int_{0}^{1 / \mathrm{n}+1 \mid}|\Psi(\mathrm{t})| \mathrm{dt} \\
& =\mathrm{O}(\mathrm{n}+1)\left[\mathrm{o}\left\{\frac{1}{(\mathrm{n}+1) \alpha(\mathrm{n}+1) \mathrm{C}_{\mathrm{n}+1}}\right\}\right] \\
& =\mathrm{o}\left\{\frac{1}{\log (\mathrm{n}+1)}\right\} \\
& =\mathrm{o}(1), \quad \text { as } \mathrm{n} \rightarrow \infty \tag{5.2}
\end{align*}
$$

From condition (3.1), (3.2) and (4.2), we have

$$
\begin{aligned}
\left|I_{2}\right| & \leq \int_{1 / \mathrm{n}+1}^{\delta}|\psi(\mathrm{t})|\left|\widetilde{\mathrm{K}}_{\mathrm{n}}(\mathrm{t})\right| \mathrm{dt} \\
& =\mathrm{O}\left[\int_{1 / \mathrm{n}+1}^{\delta}|\psi(\mathrm{t})|\left(\frac{1}{\mathrm{t}}\right) \mathrm{dt}\right] \\
& =\mathrm{O}\left[\left\{\frac{1}{\mathrm{t}} \psi(\mathrm{t})\right\}_{1 / \mathrm{n}+1}^{\delta}+\int_{1 / \mathrm{n}+1}^{\delta} \frac{1}{\mathrm{t}^{2}} \psi(\mathrm{t}) \mathrm{dt}\right] \\
& =\mathrm{O}\left[\mathrm{o}\left\{\frac{1}{\alpha\left(\frac{1}{\mathrm{t}}\right) \mathrm{C}_{\mathrm{r}}}\right\}_{1 / \mathrm{n}+1}^{\delta}+\int_{1 / \mathrm{n}+1}^{\delta} \mathrm{o}\left\{\frac{1}{\mathrm{t} \alpha\left(\frac{1}{\mathrm{t}}\right) \mathrm{C}_{\mathrm{r}}}\right\} \mathrm{dt}\right]
\end{aligned}
$$

Putting $\frac{1}{\mathrm{t}}=\mathrm{u}$ in second term

$$
\begin{align*}
& =\mathrm{O}\left[\mathrm{o}\left\{\frac{1}{\alpha(\mathrm{n}+1) \mathrm{C}_{\mathrm{n}+1}}\right\}+\int_{1 / \delta}^{\mathrm{n}+1} \mathrm{o}\left\{\frac{1}{\mathrm{u} \alpha(\mathrm{u}) \mathrm{C}_{\mathrm{u}}}\right\} \mathrm{du}\right] \\
& =\mathrm{o}\left\{\frac{1}{\log (\mathrm{n}+1)}\right\}+\mathrm{o}\left\{\frac{1}{\log (\mathrm{n}+1)}\right\} \\
& =\mathrm{o}(1)+\mathrm{o}(1), \quad \text { as } \mathrm{n} \rightarrow \infty \\
& =\mathrm{o}(1), \quad \text { as } \mathrm{n} \rightarrow \infty \tag{5.3}
\end{align*}
$$

By Riemann-Lebesgue lemma \& by regularity condition of the method of summability, we have
$\left|I_{3}\right| \leq \int_{\delta}^{\pi}|\psi(\mathrm{t})|\left|\widetilde{\mathrm{K}}_{\mathrm{n}}(\mathrm{t})\right| \mathrm{dt}$

$$
\begin{equation*}
=\mathrm{o}(1), \text { as } \mathrm{n} \rightarrow \infty \tag{5.4}
\end{equation*}
$$

Combining (5.1), (5.2), (5.3) and (5.4), we have

$$
\mathrm{I}_{1}+\mathrm{I}_{2}+\mathrm{I}_{3}=\mathrm{o}(1)
$$

Hence we proved that

$$
\tilde{\mathfrak{t}}_{\mathrm{n}}^{(\mathrm{E}, 1)\left(\mathrm{N}, \mathrm{P}_{\mathrm{n}}\right)}-\tilde{\mathrm{f}}(\mathrm{x})=\mathrm{o}(1), \text { as } \mathrm{n} \rightarrow \infty
$$

This completes the proof of Theorem 1.

## Proof of Theorem 2:

For $0<\delta<\pi$,
$\tilde{\mathrm{t}}_{\mathrm{n}}^{(\mathrm{E}, 1)\left(\mathrm{N}, \mathrm{P}_{\mathrm{n}}\right)}-\tilde{f}(\mathrm{x})=\int_{0}^{\pi} \psi(\mathrm{t}) \widetilde{\mathrm{K}}_{\mathrm{n}}(\mathrm{t}) \mathrm{dt}$

$$
\begin{equation*}
=\int_{0}^{1 / \mathrm{n}} \psi(\mathrm{t}) \widetilde{\mathrm{K}}_{\mathrm{n}}(\mathrm{t}) \mathrm{dt}+\int_{1 / \mathrm{n}}^{\delta} \psi(\mathrm{t}) \widetilde{\mathrm{K}}_{\mathrm{n}}(\mathrm{t}) \mathrm{dt}+\int_{\delta}^{\pi} \psi(\mathrm{t}) \widetilde{\mathrm{K}}_{\mathrm{n}}(\mathrm{t}) \mathrm{dt} \tag{5.5}
\end{equation*}
$$

$=J_{1}+J_{2}+J_{3}$ (say)

On applying (3.3) and (4.3), we have

$$
\begin{align*}
\left|J_{1}\right| & =\int_{0}^{1 / n}|\psi(\mathrm{t})|\left|\widetilde{K}_{\mathrm{n}}(\mathrm{t})\right| \mathrm{dt} \\
& =\mathrm{O}\left[\int_{0}^{1 / \mathrm{n}} \frac{1}{\mathrm{t}}|\psi(\mathrm{t})| \mathrm{dt}\right] \\
& =\mathrm{O}(\mathrm{n})\left[\int_{0}^{1 / \mathrm{n}}|\psi(\mathrm{t})| \mathrm{dt}\right] \\
& =\mathrm{O}\left\{\frac{1}{\log (\mathrm{n})}\right\} \\
& =\mathrm{o}(1), \text { as } \mathrm{n} \rightarrow \infty \tag{5.6}
\end{align*}
$$

From (3.3) and (4.4), we have

$$
\begin{align*}
& \begin{aligned}
&\left|J_{2}\right|= \int_{1 / \mathrm{n}}^{\delta}|\Psi(\mathrm{t})|\left|\widetilde{\mathrm{K}}_{\mathrm{n}}(\mathrm{t})\right| \mathrm{dt} \\
&=\mathrm{O}\left[\int_{1 / \mathrm{n}}^{\delta} \frac{1}{\mathrm{t}}|\Psi(\mathrm{t})| \mathrm{dt}\right] \\
&=\mathrm{O}\left[\left\{\frac{1}{\mathrm{t}} \Psi(\mathrm{t})\right\}_{1 / \mathrm{n}}^{\delta}+\int_{1 / \mathrm{n}}^{\delta} \frac{1}{\mathrm{t}^{2}} \psi(\mathrm{t}) \mathrm{dt}\right] \\
&= \mathrm{O}\left[\mathrm{o}\left\{\frac{1}{\log \left(\frac{1}{\mathrm{t}}\right)}\right\}_{1 / \mathrm{n}}^{\delta}+\int_{1 / \mathrm{n}}^{\delta} \mathrm{o}\left\{\frac{1}{\mathrm{tlog}\left(\frac{1}{\mathrm{t}}\right)}\right\} \mathrm{dt}\right] \\
&= \mathrm{o}\left\{\frac{1}{\log (\mathrm{n})}\right\}+\mathrm{o}(1)\left\{-\log \log \left(\frac{1}{\mathrm{t}}\right)\right\}_{1 / \mathrm{n}}^{\delta} \\
&=\mathrm{o}(1)+\mathrm{o}(1), \quad \text { as } \mathrm{n} \rightarrow \infty \\
&=\mathrm{o}(1), \text { as } \mathrm{n} \rightarrow \infty
\end{aligned}
\end{align*}
$$

Finally,
By using Riemann-Lebesgue theorem and regularity condition of summability, we have
$\left|J_{3}\right|=\int_{\delta}^{\pi}|\psi(\mathrm{t})|\left|\widetilde{\mathrm{K}}_{\mathrm{n}}(\mathrm{t})\right| \mathrm{dt}=\mathrm{o}(1), \quad$ as $\mathrm{n} \rightarrow \infty$
Combining (5.5), (5.6), (5.7) and (5.8) we have
$\tilde{f}_{n}^{(E, 1)\left(N, P_{n}\right)}-\tilde{f}(x)=o(1), \quad$ as $n \rightarrow \infty$
This completes the proof of Theorem 2.

## CONCLUSION

Several results concerning the product summability of Nörlund-Euler means have been reviewed with different criteria and conditions. In future, by applying more conditions we can rectify the errors and its application in the field of Fourier analysis.
